Reasons For Allowance

The invention in this case is directed to a gas turbine installation with water injection and regenerative heat exchange. Regenerators and water supply systems are well known expedients for use with gas turbines, but the prior art does not include a gas turbine plant that comprises the specific set of features described in the present claims. None of the references of record disclose or fairly suggest a gas turbine plant in combination with water supply apparatus both upstream and downstream of the plant's compressor, a regenerative heat exchanger following the downstream water supply apparatus, exhaust gas water recovery apparatus for supplying water to the system, and an external water source for supplying further water to the system. In view of this specific combination of features, the present claims are considered patentable over the prior art.
